EVANGELICAL[™]
COMMUNITY HOSPITAL

BONE HEALTH CLINIC

The board certified physicians and specialists at SUN Orthopaedics of Evangelical offer a comprehensive bone health clinic to diagnose, prevent, and treat osteoporosis.

Osteoporosis is a common condition whereby bones become weak. It most often affects women, but can also affect men, especially as they grow older. Osteoporosis is often diagnosed after a bone fracture, although warning signs are usually present well in advance.

WHO IS AT RISK?

- Women over the age of 50
- Men over the age of 65
- Anyone over the age of 50 who has experienced a bone fracture

WHO WOULD BENEFIT?

If you are in the above risk groups or have had a bone density screening showing low density, you should be evaluated in the Bone Health Clinic.

Fortunately, you can reduce your risk of osteoporosis and prevent future bone fractures. If you have already been diagnosed, there are treatment options available to slow or even stop the weakening of your bones.
